3+ years

building production web apps

540+

production releases shipped

~117k

lines of TypeScript owned

12

languages, including RTL

SUMMARY

I'm a Frontend Engineer with 3+ years of experience building production web applications with **React, Next.js and TypeScript**. My work spans AI-powered platforms, real-time apps, 3D experiences and enterprise admin systems. At Classeh, I have been the main frontend engineer of **Uryva**, an AI knowledge platform, and I have built a Three.js learning world tuned for low-end phones, a sales CRM PWA and a micro-frontend school management platform. I care as much about architecture and performance as about the details of UX, and I often design the interfaces I build.

SKILLS

Core	TypeScript (strict), JavaScript (ES2023), React 19 (hooks, context, memoization, Suspense, error boundaries), Next.js 15 (App Router, SSR/SSG, SEO), HTML5, CSS3
State & data	TanStack Query, Zustand, URL state (nuqs), React Hook Form, REST APIs, WebSockets (Socket.IO), streamed AI responses
UI & design	Tailwind CSS 4, Radix UI / shadcn, CVA, design tokens, dark/light theming, Framer Motion, responsive mobile-first and RTL layouts, Figma
Architecture	Feature-module architecture, micro-frontends (Module Federation), shared component libraries, PWA and service workers, Android WebView bridge
Graphics & viz	Three.js, React Three Fiber, glTF asset pipelines, InstancedMesh and post-processing, D3-force canvas, React Flow, ApexCharts
Quality	Playwright, Sentry, GA4, ESLint/Prettier, code review, SemVer releases, tag-driven CI/CD to Docker images
Also	Node.js / NestJS, MongoDB, Redis · AI-assisted development (Claude Code skills, hooks, subagents, MCP)

EXPERIENCE

Classeh · EdTech: learning, school management, AI and sales products · Remote Dec 2023 – Present

Frontend Developer / AI Product Engineer (Apr 2024 – Present) · Frontend Developer Intern (Dec 2023 – Mar 2024)

Uryva · AI-powered social knowledge platform 2026 – Present

React 19 · TypeScript · Vite · TanStack Query · Zustand · nuqs · Socket.IO · D3 · i18next · PWA · Sentry · Playwright · NestJS · MongoDB

- Main frontend engineer:** wrote about 93% of the frontend (2,400+ commits, ~117k lines of TypeScript) and shipped **540+ SemVer releases**.
- Designed the architecture: 20+ self-contained feature modules with enforced boundaries, a shared CVA-based component library, and clear state rules (server data in TanStack Query, client state in feature-scoped Zustand stores, shareable state in the URL).
- Built the core experiences: a D3-force canvas knowledge graph with gestures, a multi-step AI creation studio with streamed output, a slide editor with undo/redo and version history, a hex-grid timeline map and full messaging (groups, voice, images, reactions, replies).
- Performance:** chunk prefetching to remove navigation delay, lazy-loaded images, memoized canvas work during pan and zoom, a fix for requestAnimationFrame scroll jank on mobile, audio payload cut from ~120 MB to 56 MB, and auto-recovery from stale chunks after deploys.
- Auth, security and i18n:** JWT cookie auth with automatic refresh, AI-consent gating on the frontend and API, and a fix for an unguarded production endpoint. Also scaled i18n from 4 to 12 languages (~5,300 keys each, including RTL).
- Also made about 480 backend commits (NestJS): messaging, Atlas, a translation cache and OG previews for shared links.

Fahmyar · gamified 3D learning app for K-12 students2026 – Present

React 19 · TypeScript · Three.js · glTF / gltf-transform · Vite

- Built the **3D open-world City Hub**, where each lesson is a building that reflects the student's real progress, plus **11 Three.js learning games** (detective and escape rooms, an evidence court, a boss fight, a cinematic tank duel, a debate arena and more). That adds up to about 79k lines of scene code.
- Extracted a **shared rendering library** (post-processing, quality tiers, batching, texture caches) that later scenes import instead of copying.
- Tuned for low-end phones: draw calls cut from 1,454 to 621 (–57%) with InstancedMesh, lights from 27 to 11, and a steady 30 fps on weak devices. GLB pipeline scripts brought rigged characters from 273 MB to 0.9 MB.

Classeh Target · sales CRM, mobile-first PWA2026 – Present

React 19 · TypeScript · TanStack Query · Zustand · React Hook Form · nuqs · Firebase · Sentry · GA4 · PWA

- Top contributor to a CRM that sales reps use every day in the browser and in an Android WebView. Added a responsive desktop layout to the mobile-only app (previously locked to 440px).
- Built a 3-step invoice wizard with a live cart, VAT-aware discounts, permission-gated pricing and draft persistence. Also built AI call-history summaries and one-tap messaging to WhatsApp, Bale and SMS, working around iOS Safari restrictions.

School Management Platform · admin, teacher, student and parent apps2025 – Present

React · TypeScript · Module Federation · TanStack Query · Zustand · Socket.IO · TipTap · ApexCharts

- Top contributor (1,000+ commits) to the admin app of a four-app Module-Federation platform. Built the financial module (journals, transactions, tuition, payslips, Excel export), report cards with batch PDF export and batched score submission, and parts of the real-time messenger.

Classeh website & CMS · Next.js2024 – 2025

Next.js 15 (App Router) · React · TypeScript · Tailwind CSS · NextUI · Sentry · next-intl

- One of the two main developers (260+ commits) of the server-rendered, CMS-driven company website. Implemented per-page generateMetadata with Open Graph for SEO and set up Sentry. Also built parts of the CMS admin.

Mojalal Real Estate · Frontend Developer (Part-time) · RemoteJun 2023 – Dec 2023

- Built a property management platform with advanced filtering, a physical-key tracker with Firebase real-time alerts, Google Maps proximity insights, an OpenAI listing assistant, role-based access control and Zustand-persisted multi-step forms.

PROJECTS

Torob Khaneh · Persian natural-language home searchgithub.com/kiana-nb/torob-khaneh · live demo

Next.js 15 (static export) · React 19 · TypeScript strict · Tailwind CSS 4 · TanStack Query · Zustand · nuqs · Leaflet · Node.js data pipeline · Vercel

- Persian natural-language apartment search over real Tehran listings, built solo for Torob's AI Product Engineer challenge: a Node.js crawl-and-dedupe pipeline (union-find, 739 listings became 698 homes), a rule-based parser that turns a query into editable intent chips, and a **transparent 6-factor ranking** in which every card explains its position.

Hobzi · sports class marketplacehobzi.ir

TanStack Start · React 19 · TypeScript · Tailwind CSS 4 · Zustand · shadcn/ui · Leaflet

- Built the frontend of a Persian (RTL) marketplace for finding, comparing and booking sports classes: the whole student loop (search, class page, checkout, schedule, favorites), a venue panel, an in-app messenger and map views. Added **smart search with transparent ranking**, side-by-side comparison and price analysis, plus a mock/API data-source switch so the frontend could ship ahead of the backend.

Pixel Portfolio · my portfolio as a tiny indie gamekiana-nabipour.vercel.app · source

Vite · React 19 · TypeScript · Canvas 2D · WebAudio · Vercel

- A walkable pixel-art room drawn in code on a low-resolution canvas (no game engine): project cartridges boot on a CRT, and a street outside walks through my career. Respects reduced motion and light/dark mode, and has a plain quick view for recruiters.
