3+ years

taking products from idea to production

540+

releases shipped on one product

4

production products built in parallel

12

languages, including RTL

SUMMARY

I'm a Product Engineer with 3+ years of experience taking products from idea to production: discovery, UX and UI design, frontend architecture, backend APIs, release and iteration. At Classeh, I have been the product engineer of **Uryva**, an AI-powered knowledge platform. I turn stakeholder feedback into phased specs, design the flows, build them (about 93% of the frontend and ~480 backend commits) and verify every phase in production, across 540+ releases. I have also shipped AI features for a sales team, a 3D learning world for K-12 students and enterprise school tools. I'm deepening my product practice through courses in product management, design thinking and decision-making.

CORE STRENGTHS

Product & UX

Discovery and problem framing, turning feedback into specs and phased plans, UX flows and UI design (Figma), prioritization, release planning, product analytics (GA4), plain-language stakeholder reporting.

Engineering

React 19, Next.js, TypeScript, TanStack Query, Zustand, Tailwind CSS · NestJS, MongoDB, Redis, Socket.IO · Three.js · PWA · Playwright, Sentry, SemVer releases.

AI products & workflow

LLM features (Claude, OpenAI, streaming UX, consent gating, latency and cost tuning) · AI-native delivery with Claude Code skills, hooks, subagents and MCP (Playwright, Plane, Figma).

EXPERIENCE

Classeh · EdTech: learning, school management, AI and sales products · Remote Dec 2023 – Present

Frontend Developer / AI Product Engineer (Apr 2024 – Present) · Frontend Developer Intern (Dec 2023 – Mar 2024)

Uryva · AI-powered social knowledge platform 2026 – Present

React 19 · TypeScript · Vite · TanStack Query · Zustand · nuqs · Socket.IO · D3 · i18next · PWA · Sentry · Playwright · NestJS · MongoDB

- **Owned the product end to end:** I turned PO and stakeholder feedback into phased plans with acceptance criteria, designed the UX and UI, built the frontend and supporting APIs, and verified each phase on the deployed environment with Playwright before starting the next.
- Ran the **AI consent and release-readiness program** (a 36-item release UX spec): consent gating on every AI-triggering route (NestJS guard plus frontend flow), data export and account deletion. The audit also caught and fixed an unguarded AI endpoint.
- Led a **product terminology audit** that unified the product's vocabulary (e.g. Thread, Series and Journey became "Folio Flow") across every screen and 12 languages, without touching frozen code identifiers or API contracts.
- Designed and shipped the core experiences: a knowledge-graph explorer, an AI creation studio with streamed output, a historical timeline map (frontend and backend), messaging and onboarding. Expanded the app from 4 to 12 languages to match its 12 cultural audiences.
- **Tuned AI features for UX:** lower reasoning effort and faster models where latency mattered, user-facing prompts capped at an A2-B1 reading level, and a fix for cached suggestions that ignored the user's language.
- Built backend modules in NestJS: direct messaging (REST and a socket gateway), the Atlas map, and entity/profile claiming with Wikidata auto-fill, an email challenge and an audit trail.

Classeh Target · sales CRM with AI assistance 2026 – Present

React 19 · TypeScript · TanStack Query · Zustand · React Hook Form · nuqs · Firebase · Sentry · GA4 · PWA

- **Validated UX before the backend existed** by adding a mock-API mode (smart-message modal and lead-analysis page on mock data), then connected everything to the real APIs.
- Shipped AI call-history summaries, next-best-action chips and AI-suggested messages sent with one tap to WhatsApp, Bale or SMS. **Added GA4 events** to measure how reps actually used them.
- Redesigned the lead page around the sales rep's workflow: key customer facts on list cards, one consolidated detail card, missing-field warnings, and required call logging for cleaner sales data. Wrote plain-language release reports for managers.

Fahmyar · gamified 3D learning app for K-12 students

2026 – Present

React 19 · TypeScript · Three.js · glTF / gltf-transform · Vite

- Turned the 3D city from a demo into the real product: each student's actual lessons became buildings whose state shows progress, with a fallback list so no lesson is ever unreachable. Built **11 3D learning games**, including an evidence court where wrong answers lead to guiding questions instead of failure.
- Made it work on students' low-end phones (57% fewer draw calls, a steady 30 fps). Designed an AI-agent pipeline that produced a **1,565-asset, curriculum-mapped 3D library** after I approved sample quality.

School Management Platform · admin, teacher, student and parent apps

2025 – Present

React · TypeScript · Module Federation · TanStack Query · Zustand · Socket.IO · TipTap · ApexCharts

- Top contributor (1,000+ commits) to the admin app. Built finance workflows, including bulk tuition for up to 500 students with clear per-student failure feedback, report cards with batch PDF export, and parts of the real-time school messenger.

Mojalal Real Estate · Frontend Developer (Part-time) · Remote

Jun 2023 – Dec 2023

- Built a property management product for real-estate agents: listings with advanced search, physical-key tracking with real-time alerts, map-based location insights and an OpenAI assistant that improves listing copy.

PROJECTS

Torob Khaneh · Persian natural-language home search

github.com/kiana-nb/torob-khaneh · live demo

Next.js 15 (static export) · React 19 · TypeScript strict · Tailwind CSS 4 · TanStack Query · Zustand · nuqs · Leaflet · Node.js data pipeline · Vercel

- **Did everything solo** for Torob's AI Product Engineer challenge: user research and product plan, a Node.js crawl-and-dedupe pipeline (739 listings became 698 homes), a rule-based parser that turns a Persian query into editable intent chips, and a **transparent 6-factor ranking** in which every card explains its position.

Hobzi · sports class marketplace

hobzi.ir

TanStack Start · React 19 · TypeScript · Tailwind CSS 4 · Zustand · shadcn/ui · Leaflet

- Built the frontend of a Persian (RTL) marketplace for finding, comparing and booking sports classes: the whole student loop (search, class page, checkout, schedule, favorites), a venue panel, an in-app messenger and map views. Added **smart search with transparent ranking**, side-by-side comparison and price analysis, plus a mock/API data-source switch so the frontend could ship ahead of the backend.

Pixel Portfolio · my portfolio as a tiny indie game

kiana-nabipour.vercel.app · source

Vite · React 19 · TypeScript · Canvas 2D · WebAudio · Vercel

- A walkable pixel-art room drawn in code on a low-resolution canvas (no game engine): project cartridges boot on a CRT, and a street outside walks through my career. Respects reduced motion and light/dark mode, and has a plain quick view for recruiters.
